Arduino is an open-source electronics prototyping platform based on flexible, easy-to-use hardware and software. It's intended for artists, designers, hobbyists, and anyone interested in creating interactive objects or environments.

Arduino can sense the environment by receiving input from a variety of sensors and can affect its

p/dogmI28/](http://code.google.com/p/dogmI28/)

A screenshot of the Arduino IDE interface. The title bar says 'Blink | Arduino 0021'. The main window displays the 'Blink' sketch:

```
/*
  Blink
  Turns on an LED on for one second, then off for one second, repeatedly.

  This example code is in the public domain.

void setup() {
  // initialize the digital pin as an output.
  // Pin 13 has an LED connected on most Arduino boards:
  pinMode(13, OUTPUT);
}

void loop() {
  digitalWrite(13, HIGH); // set the LED on
  delay(1000); // wait for a second
  digitalWrite(13, LOW); // set the LED off
  delay(1000); // wait for a second
}
```

The status bar at the bottom shows the number '1'.

Badge Specific Codes

```
int a0Pin = I; // address line a0 for the dogm module
```

```
DDRB |= (I<<PB0); SET LCD POWER  
PORTB |= (I<<PB0);
```

```
DDRB |= (I<<PB1); CLEAR RESET  
PORTB |= (I<<PB1);
```

```
pinMode(4, OUTPUT); // Activate Buttons  
digitalWrite(4, HIGH);
```

```
DDRC |= (I<<PC2); //Activate Right LED  
PORTC &= ~(I<<PC2);
```

Arduino programs can be divided in three main parts: *structure*, *values* (variables and constants), and *functions*.

Structure

+ <code>setup()</code>	Constants
+ <code>loop()</code>	+ <code>HIGH LOW</code>
Control Structures	+ <code>INPUT OUTPUT</code>
+ <code>if</code>	+ <code>true false</code>
+ <code>if...else</code>	+ <code>integer constants</code>
+ <code>for</code>	+ <code>floating point constants</code>
+ <code>switch case</code>	
+ <code>while</code>	
+ <code>do...while</code>	
+ <code>break</code>	
+ <code>continue</code>	
+ <code>return</code>	
+ <code>goto</code>	
Further Syntax	
+ <code>;</code> (semicolon)	+ <code>void</code>
+ <code>{}</code> (curly braces)	+ <code>boolean</code>
+ <code>//</code> (single line comment)	+ <code>char</code>
+ <code>/* */</code> (multi-line comment)	+ <code>unsigned char</code>
+ <code>#define</code>	+ <code>byte</code>
+ <code>#include</code>	+ <code>int</code>
Arithmetic Operators	+ <code>unsigned int</code>
+ <code>=</code> (assignment operator)	+ <code>word</code>
+ <code>+</code> (addition)	+ <code>long</code>
+ <code>-</code> (subtraction)	+ <code>unsigned long</code>
+ <code>*</code> (multiplication)	+ <code>float</code>
+ <code>/</code> (division)	+ <code>double</code>
+ <code>%</code> (modulo)	+ <code>string</code> - char array
Comparison Operators	+ <code>String</code> - object
+ <code>==</code> (equal to)	+ <code>array</code>
+ <code>!=</code> (not equal to)	
+ <code><</code> (less than)	
+ <code>></code> (greater than)	
+ <code><=</code> (less than or equal to)	
+ <code>>=</code> (greater than or equal to)	
Boolean Operators	
+ <code>&&</code> (and)	+ <code>sizeof()</code>
+ <code> </code> (or)	
+ <code>!</code> (not)	
Pointer Access Operators	
+ <code>* dereference operator</code>	
+ <code>& reference operator</code>	

Variables

Constants	Digital I/O
+ <code>HIGH LOW</code>	+ <code>pinMode()</code>
+ <code>INPUT OUTPUT</code>	+ <code>digitalWrite()</code>
+ <code>true false</code>	+ <code>digitalRead()</code>
Data Types	Analog I/O
+ <code>void</code>	+ <code>analogReference()</code>
+ <code>boolean</code>	+ <code>analogRead()</code>
+ <code>char</code>	+ <code>analogWrite() - PWM</code>
+ <code>unsigned char</code>	
+ <code>byte</code>	
+ <code>int</code>	
+ <code>unsigned int</code>	
+ <code>word</code>	
+ <code>long</code>	
+ <code>unsigned long</code>	
+ <code>float</code>	
+ <code>double</code>	
+ <code>string</code> - char array	
+ <code>String</code> - object	
+ <code>array</code>	
Conversion	Advanced I/O
+ <code>char()</code>	+ <code>tone()</code>
+ <code>byte()</code>	+ <code>noTone()</code>
+ <code>int()</code>	+ <code>shiftOut()</code>
+ <code>word()</code>	+ <code>pulseIn()</code>
+ <code>long()</code>	
+ <code>float()</code>	
Variable Scope & Qualifiers	Time
+ <code>variable scope</code>	+ <code>millis()</code>
+ <code>static</code>	+ <code>micros()</code>
+ <code>volatile</code>	+ <code>delay()</code>
+ <code>const</code>	+ <code>delayMicroseconds()</code>
Utilities	Math
+ <code>sizeof()</code>	+ <code>min()</code>
	+ <code>max()</code>
	+ <code>abs()</code>
	+ <code>constrain()</code>
	+ <code>map()</code>
	+ <code>pow()</code>
	+ <code>sqrt()</code>
Trigonometry	Trigonometry
	+ <code>sin()</code>
	+ <code>cos()</code>
	+ <code>tan()</code>
Random Numbers	
	+ <code>randomSeed()</code>
	+ <code>random()</code>
Bits and Bytes	
	+ <code>lowByte()</code>
	+ <code>highByte()</code>
	+ <code>bitRead()</code>
	+ <code>bitWrite()</code>
	+ <code>bitSet()</code>
	+ <code>bitClear()</code>
	+ <code>bit()</code>
